NAME OF THE COU	IRSE	Statistical method	ds						
Code	Pivac,	ofessor Snježana PhD	Year of study 1 5						
Course teacher	Assistant professor Tea Šestanović, PhD Assistant professor Marija Vuković, PhD		Credits (ECTS)						
Associate teachers	Assista Vukovi	nt professor Marija ć, PhD	Type of inst (number of		L 26	S	E 26	F	
Status of the course	Optiona			of e-learning	30%				
			E DESCRIPT						
Course objectives	The main aim of the course is to ensure the acquisition of knowledge and skills to select the appropriate statistical methods, their implementation and conclusion in economic research. Students will master the relevant statistical methods those they will be able to use in economic research.								
Course enrolment requirements and entry competences required for the course	<b>Course signature requirements</b> : as determined by the Statute of the Faculty of Economics and Rules and Regulations for Studies and Study Programmes.								
Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	<ul> <li>Learning outcome of the subject: To conclude about the research-scientific hypotheses based on the designed the survey research, selection of relevant sample and testing of the statistical hypotheses as well as estimated and validated statistical models.</li> <li>Specific learning outcomes: <ol> <li>To select the relevant and representative sample according to the research objective</li> <li>To create the database from the secondary and/or primary sources based on the created questionnaire and the research hypotheses</li> <li>To select relevant statistical test and the method to conclude about the research hypotheses</li> </ol> </li> <li>To conclude about appropriate research hypotheses those are set up in accordance with economic theory and practice, using selected statistical hypotheses testing</li> <li>To validate the appropriate statistical model with qualitative and/or quantitative variables according to the research objectives</li> <li>To conclude about the interdependence between observed variables based on the estimated and tested statistical model</li> </ul>

	Exam: written exam and/or seminar essay and oral exam. A positive assessment from the written exam and/or the seminar essay is a precondition for passing the oral exam. During the semester, two tests will be organized (the computer aided tests). Additional requirement for the second test is the positive assessment from the first test. Alternatively, students can pass a written exam by written exam and/or seminar essay during the exam period. * The student who pass the first and the second computer aided test does not need to write a written exam and/or seminar essay. ** During the semester the two tests will be organized as an alternative to the oral exam. Additional requirement for the second test the positive assessment from the first test. The overall grade represents the mean (positive) scores achieved on both tests. Students can pass the oral exam during the exam period. A student who achieves a positive assessment from the first and second tests does not have to go to the oral exam. Points and appropriate marks: 0% - 49% - insufficient (1) 50% - 62% - sufficient (2) 63% - 75% - good (3) 76% - 88% - very good (4) 89% - 100% - excellent (5)

Quality assurance methods that ensure the acquisition of exit competences	Registering students' success in carrying out of their duties (lecturer). Monitoring lectures and practice sessions (Vice Dean for Education). Students' Performance analysis in each course (Vice Dean for Education). Student questionnaire on the quality of lecturers and lessons for each course (University of Split, Quality Assurance Centre) Examination is used as an instrument to evaluate individual course outcomes by the course lecturer. The content of exam is reassessed periodically in order to assure compliance with the course outcomes.
